

Complete Line of High Speed Disk Centrifugal Separators For The Production Of Biodiesel

SRS offers a complete line of high speed disk automatic and manual cleaning centrifugal separators. SR BD Series are designed to maximize separation performance on both low and high free fatty acid feed stocks. The SR BD Series separators range in operating capacity from 2 gpm to 120 gpm and can be configured to meet the ever-changing feed streams. Whether you operate a small biodiesel facility using soy oil or a large facility that utilizes yellow grease or tallow as your feedstock, SRS can provide the solution to your processing needs.
